

## Going Tapeless with Tape for Video Professionals

### P5 Archive + LTO Tape: Make Space, Take Control.

High performance storage is always scarce. Archiving creates space, reduces the risk of data loss and avoids the hassle of constantly having to increase storage. Archiving also reduces the cost of storage since tape offers the lowest cost per TB of any medium. Archiving keeps all completed productions in one place. Browse and search anything anytime.

Tandberg Data is the worlds first and only manufacturer to offer a table-top LTO drive with a Fibre Channel interface. Combined with **P5 Archive** the result is a easy, robust and scalable solution. Access and configuration via browser make it flexible and offer insight wherever you are.

Every Mac with Thunderbolt™ can now be connected to FibreChannel devices using SANlink by Promise.

Archware **P5 Archive**, Archware's fully featured archive software, can be used stand-alone or as the archiving backend for Asset Management systems thanks to its integration friendly interface. In order to offer maximum data security, the feature set of P5 Archive includes a cloning option, creating duplicate sets of tapes for off-site storage or a clone of the archive in the cloud. For LTO tape, the parallelization feature provides scalability regarding performance and number of archive/restore jobs running simultaneously.

Archware and Tandberg Data are the ideal combination for your data management. **P5 supports all Tandberg Data drives and tape libraries like the NEO T24 and extensible NEOxl 80 to NEOxl 8000.**
